IRON RESERVOIR VASES

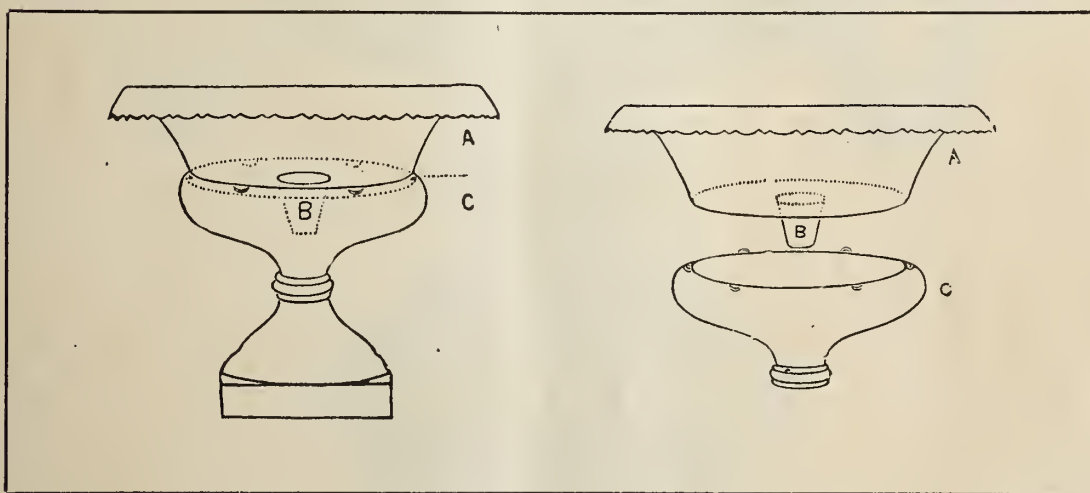

WALBRIDGE & COMPANY
BUFFALO, N. Y.

61-10

Iron Reservoir Vases

THE peculiar feature in these vases consists in the reservoir for water, as shown in the cuts below. **They do not need watering oftener than once in ten or fifteen days,** according to the size of the vase. The moisture being drawn upward by capillary attraction (as in nature), the ground does not become caked or hard, as in ordinary vases, but remains open and porous during the entire season. There is no excess of moisture, and plants thrive in them to perfection.

EXPLANATION

¶**A**—The earth receiver. ¶**C**—The reservoir for water, which is filled through apertures, as shown in the cut. ¶**B**—Tube connecting the earth receiver with the reservoir. This tube is packed with moss or sponge, through which the moisture is drawn up into the earth by capillary attraction. ¶We are the original makers and patentees of the **Reservoir Vases** illustrated in the following pages. Some of our designs (which cost us a great deal of thought and money) have been appropriated by unscrupulous parties. They have made castings from our vases, with the result that their goods are not as smooth and well finished as ours, which are made from the original patterns. We intend that our prices shall at all times be as low as those of any other manufacturer, and as our line is complete, and our stock on hand sufficient to enable us to fill orders promptly, we hope to merit your patronage.

Dakota Vase

Height to top of handles, 5 feet 2 inches

Width, including handles, 5 feet 4 inches

Base, 21 inches square

Diameter of Vase, 37 inches

Capacity of Reservoir, 16 gallons

Price, painted, \$94.00
